

Design and Application Details

OVENPAK® Burners are nozzle-mixing gas burners for many industrial direct-fired applications where clean combustion and high turndown are required. They are simple and versatile for use on a variety of heating applications.

The Model "400" OVENPAK® Burner (shown at right) includes a combustion air blower with non-sparking paddle wheel-type impeller, pilot, spark ignitor, stainless steel discharge sleeve, mixing cone, self-contained internal air and gas proportioning valves, and provision for your flame safeguard sensor.

Right: Model 415 OVENPAK® Gas Burner with optional:

- combustion air filter
- connecting base and linkage assembly
- electrical control motor (by others)

Cross sectional view of a Model "400" OVENPAK® Gas Burner

Principle of operation (illustrated at left)

The OVENPAK® Burner is designed for industrial air heating applications. It is available in two basic versions: 1) packaged with integral combustion air blower, or 2) for use with an external blower. Both versions include a gas and air valve, internally linked together to control the gas-air ratio over the full operating range. The gas flows through the nozzle, then along the inside of the burner cone where combustion air is progressively and tangentially mixed with the gas. This produces a very wide turndown range and a highly stable flame under a variety of operating conditions.

Design and Application Details

Model "EB" (external blower) OVENPAK® Burners (shown at right), like all OVENPAK® Burner assemblies, are designed to deliver heat through a patented mixing cone and stainless steel sleeve.

Flanged burner body design on all OVENPAK® Burner assemblies simplifies mounting and installation on your application. Burner can be installed in any position that does not conflict with your control motor or flame detector requirements.

Minimal torque requirements permit use of most electric or air operators in conjunction with the optional (Maxon supplied) connecting base and linkage assemblies.

EB version

Model EB-3 OVENPAK® Burner arranged for external blower source with connecting base and linkage assembly to adapt customer's automatic control motor

Model "EB-MA" OVENPAK® Burner with discharge sleeve and optional manual gas control

"EB-MRV" versions (photo at right)

"EB-MRV" versions of OVENPAK® Burners permit air/fuel ratio control via a Maxon MICRO-RATIO® control valve throughout the firing range. They differ from standard "EB" burners in that internal gas and air butterflies and the related shafts and linkages are omitted.

In normal operation, air and fuel will be proportioned by an external Maxon MICRO-RATIO® Control valve.

Maximum capacities match those cataloged for "EB" burners of equivalent size and differential air pressure. **Minimum capacity** and air differential pressure will vary with your application.

"400-MA" and "EB-MA" versions

Model "400-MA" versions include a combustion air blower in your choice of the voltages shown on page 2107, but provide constant combustion air volumes. They differ from "standard" versions by use of a slotted adjustable air butterfly locking device as shown in photo at left. Internally, the linkage normally cross-connecting air and gas butterflies is omitted.

In normal operation, the air butterfly is set to the desired air differential pressure, and the fuel only is throttled by a separate control valve. **Maximum capacities** match those cataloged for "standard" burners of equivalent size. **Minimum capacities** with full air flow will be higher than those of "standard" burner.

Model "EB-MRV" OVENPAK® Burner with optional 12" discharge sleeve

Capacities and Specifications – 60 Hertz

Standard Model "400" OVENPAK® Burner includes a combustion air blower with motor.

Maximum capacity of Model "400" OVENPAK® Burner is affected by the static pressure within the combustion chamber. Data shown assumes firing in the open, or into an airstream with enough oxygen to complete the combustion process. If burner is fired into an oxygen-starved chamber or airstream, capacities may be reduced as much as 25-30%. Do not attempt to operate beyond the duct static pressure range shown. For higher back pressure applications, select from Model "EB" or "EB-MRV" OVENPAK® Burner options.

All gas pressures are differential pressures and are measured at the gas pressure test connection on the backplate of each OVENPAK® Burner. Differential pressures shown are approximate.

Accessory Options

Air filter assemblies and silencers

Air filter assemblies help to trap airborne particulate matter. They are offered with washable replaceable filter elements or with permanent metallic elements (as shown in photograph above). Filters mount onto OVENPAK® Burner's blower housing (or silencer housing of burners so equipped) and surround the blower motor and combustion air inlet.

Filter silencers help reduce noise levels. They mount onto OVENPAK® Burner's blower housing and enclose the blower motor and combustion air inlet (as shown in above photograph). They can be furnished in conjunction with a permanent or replaceable filter element assembly described above.

dB(A) sound levels from actual tests conducted at full-rated 60 Hz capacity are shown in table at right. Measurement point is shown in sketch below. (Meter was set to A-scale, slow response.)

Operation on 50 Hz power results in lower rotational speed of blower, and so reduces air output, capacity, and resulting noise levels. 50 Hz noise levels should not exceed the above data measured on 60 Hz operation.

Burner Model	Sound Level dB(A)	
	Standard Burner	with Silencer
405	84	75
407M	83	77
408M	84	75
408	87	78
412M	81	73
413M	82	72
415	89	77
422M	88	79
425	89	78
432M	88	80
435	87	78
442M	89	80
445	89	81
456M	90	83
470M	92	83
487M	94	85

Accessory Options

Universal Joint Arrangements (for all versions except EB-MRV) allow control of as many as 5 burners by a single control motor. Torque requirement is 10 in-lbs for EACH burner driven. Primary burner should drive no more than 2 Secondary burners to either side of itself.

Miniature universal joints simplify burner alignment. Aluminum connecting rod can be cut to fit actual burner spacing. (Allowable distance between adjacent burner centerlines is 21" – 33" for 422M and smaller, 23.5" – 36" for larger burners.)

To order, specify:

1. Primary and secondary burners
2. Any other accessories desired
3. Required quantity of Universal Joint Assemblies

Manual Handle Kit permits setting and locking air and fuel valves at a constant firing rate. See photo below.

Auxiliary Switches

Maxon offers 4 types, all cam-actuated by the burner main operating shaft. (If Universal Joint Arrangements are used, switch must mount on furthest left burner.) Field installation MAY require burner modification per instructions provided in Product Information Sheet 2000-7/8.

Low Fire Start Switch Assembly (SPDT) opens the circuit when burner leaves minimum position. Also available in Weatherproof and Hazardous Location/Weatherproof versions.

High and Low Fire Position Switch Assembly includes 2 SPDT switches. One switch may be field-set to activate at high fire position, while other is set to activate at low fire position. Switch assemblies are also available in a weatherproof version.

Low Fire Start Switch shown

Discharge Sleeve Mounting Gaskets

Standard discharge sleeve gasket provides adequate sealing in most applications.

High Back Pressure Gasket Kit includes 2 additional gaskets to provide sealing against back pressures as shown in sketch below.

Standard Arrangement

With High Back Pressure Kit

Accessory Options

Hi/Lo Control Motor Sets for high or low firing. Optional set includes 2-position unidirectional 11-second 120v 50/60 Hz motor and connecting base with mounting linkage. See table below for dimensions which differ from standard burner.

Burner Model		Dimensions in Inches		
		P	R	T
EB-1, 2	405 - 413M	10.25	17.63	7.75
EB-3	415 - 422M	10.19	17.56	7.75
EB-4, 5	425 to 442M	11.69	19.06	8.75
EB-6, 7	445 - 487M	16.69	24.06	8.75

Discharge Sleeves are available in 3 versions:

- **Standard sleeve** is 8" long, made of #310 SS, and is suitable for downstream temperatures up to 1000°F (538°C).
- **For higher velocities**, specify 12" long sleeve made of #310 SS for downstream temperatures up to 1000°F (538°C).
- **For higher downstream temperatures** between 1000°F (538°C) and 1500°F (816°C), specify 8" long, #RA 330 SS sleeve.

310 SS (std.) or
RA 330 (Hi Temp.)

Component Identification

Suggested spare parts

- Spark Ignitor
- Flame Rod, if used
- Filter Elements, if used
- Mixing Cone
- Discharge Sleeve and Gasket
- Motor
- Impeller
- Gas/Air Valve Linkage Kit

To order parts for an existing OVENPAK® Burner assembly, list:

1. Name(s) of part(s) from above illustration
2. Quantity of each required
3. OVENPAK® Burner nameplate information:
 - size and model number of burner
 - assembly number
 - date of manufacture
 - if available, serial number of Maxon fuel shut-off valve in-line to OVENPAK® Burner (This serial number is on Maxon valve's nameplate.)

Nameplate

Date of Mfr.

Suggested Maintenance/Inspection Procedures

Discharge sleeve and cone alignment

Centering of the mixing cone provides a small annular opening for the flow of some cooling combustion air along the discharge sleeve wall. We SUGGEST periodic inspection from the discharge side of the burner to assure that this alignment is maintained.

Caution: Tightening can lead to cone distortion and greatly reduce cone and discharge sleeve life. Cone should be free to move and allow for thermal expansion.

If re-adjustment is necessary, back out the four lock nuts and re-center mixing cone with adjusting screws handtight. Back each screw out one-half turn before re-locking. This allows for thermal expansion as cone gets hot.

Filters should be inspected regularly and cleaned, using a vacuum to remove loose/dry accumulations, then washing and/or degreasing as appropriate for the filter type used.

To replace flame rod or spark ignitor:

1. Check Table 1 at right for dimension "Y" and cut tip to length shown.
2. Insert 1/2" NPT collar into burner and snug into position.
3. Insert insulator through collar into burner.
4. Check table for dimension "X", position accordingly, and tighten locking bushing until insulator is held firmly.

WARNING: Over-tightening locking bushing may damage insulator.

NOTE: A full-wave 6000 volt spark ignition transformer is suggested for use with Maxon burner equipment.

Flame Rod

NOTE: 1/2" x 1" adapter bushing supplied by others

Maxon Pre-Assembled Package Model "400" OVENPAK® Gas Burner System

425 OVENPAK®
package system
installed and
mounted onto a
Maxon
pre-fabricated
heater/duct section

Save time and reduce your installation costs with a completely assembled and pre-wired burner and pipe train "package".

All system components have been carefully selected to match the high performance characteristics of the Model "400" OVENPAK® Gas Burner.

The compact design of this "packaged system" makes mounting to your duct fast and easy. Connect to the gas line and bring in electricity. It's wired and piped, ready to go.

All pre-assembled package systems include a Model "400" OVENPAK® Burner and pipe train. The pipe trains are available with "Block and Bleed" arrangement options only.

Additional application flexibility is provided with five different sized systems, all with 40:1 turndown capacity ranges.

Packaged OVENPAK® Burner systems may also be mounted in a pre-fabricated combustion heater/duct section by Maxon. This option is value-engineered to give you the most for your dollar spent.

Design / Application Summary

Five Model "400" OVENPAK® pre-assembled package options:

OVENPAK® Burner Model >	405	408	415	425	435
Totally Enclosed Blower Motor	Horsepower			1/3	
	Frame Number			48	
Maximum Capacity (Btu/hr)	500,000	800,000	1,500,000	2,500,000	3,500,000
Minimum Capacity (Btu/hr) main plus pilot	15,000	20,000	37,000	60,000	87,000
Minimum natural gas pressure required at pipe train inlet	6" wc		10" wc	9" wc	14" wc
Inlet pipe train size NPT	1.25"			1.5"	
Approximate overall envelope dimensions	42" long x 40" high x 24" wide				

Pre-assembled pipe train "package"

includes the following components:

- Burner gas shut-off cock
- Main inlet gas shut-off cock
- Pilot gas train consisting of:
 - Pilot gas shut-off cock
 - Pilot gas pressure regulator (maximum 1 PSIG natural gas inlet pressure)
 - Pilot gas solenoid valve, 115/60VAC
- Main gas pressure regulator (maximum 1 PSIG natural gas inlet pressure)
- Combustion air pressure switch, automatic reset, NEMA 1, 115/60VAC
- Combination high and low gas pressure switch, manual reset, NEMA 1, 115/60VAC
- Spark ignition transformer, 6000 volts, NEMA 1, 115/60VAC
- NEMA type 12 and 13 junction box with terminal wiring strip
- Normally open vent solenoid valve, 115/60VAC

A complete packaged system also includes:

- Maxon Model "400" OVENPAK® Burner assembly
 - Connecting base and linkage assembly to adapt customer-supplied automatic control motor (optional)
 - Low fire start switch (mounted to OVENPAK® Burner)
 - Air filter assembly
- Maxon main gas shut-off valve, position "L", 115/60VAC
- Maxon main gas "blocking" shut-off valve, position "L", 115/60VAC00000000

Factory pre-wiring includes the following components for 115 volts 60 hertz AC:

- Low fire start switch
- Combustion air pressure switch
- Combination high and low gas pressure switch
- Pilot gas solenoid valve
- Normally-open vent solenoid valve (when used)
- Spark ignition transformer
- Maxon "main" and/or "blocking" gas shut-off valve(s)
- NEMA type 12 and 13 junction box with terminal wiring strip

Field wiring is required:

- To the packaged system's junction box wiring strip
 - To the Model "400" OVENPAK® Burner's combustion air blower motor
 - Between your flame safeguard relay and the OVENPAK® Burner's flame sensor
- NOTE:** A flame rod may be furnished by Maxon; UV detector is a part of the control package when supplied by Maxon or may be supplied by others.
- Other field wiring connections may be required if your control circuit includes high/low temperature limits, automatic temperature controller, and/or other miscellaneous safety limit switches.

Maxon Packaged Heater/Duct Sections

Reduce your fabrication time with a complete combustion heater/duct including the prewired and prepiped Model "400" OVENPAK® Burner system package.

Easy installation is provided by flanged duct connection joints. Burner is mounted to a .312" mild steel wall, lined with 6" thick fiber insulation. The other 16 gauge aluminized steel heater/duct walls are ready for your insulation.

Application flexibility is offered by three sizes of ducts. All sizes can be fabricated to have return/inlet opening at any 90° increment position (viewing from the back of the OVENPAK® Burner). Continuous welds on all joint seals permit duct section installation on pressure-side or suction-side applications.

NOTE:
9/16" holes located on 6" centerlines for all mounting flange joints

Approximate duct section dimensions (in inches)

Model	A	B (inside)	C	D (inside)	E	F	G	H	J (inside)	K
405 - 408	12	24	5	10	36	48	12.62	26.62	7.5	37
415	15	30	6	12	42	60	14.62	32.62	9.5	48
425 - 435	18	36	8	16	48	72	18.62	38.62	11.5	58

Maxon Packaged Heater/Duct Sections Design and Application Details

Maximum discharge temperature 600°F (316°C)

Duct static pressures may range between +2" wc and -5" wc

Optimum design parameters permit up to 3000 feet per minute air velocity through return/inlet duct.

Recommended maximum discharge air volumes

Model "400" OVENPAK® Burner	405	408	415	425	435
Maximum discharge air volume in SCFM	5000		7500	12,000	

To select your packaged system, specify:

1. **Quantity** _____

2. **Model "400" OVENPAK® Gas Burner Assembly** _____, for natural gas
 - Arranged for UV detector, or with flame rod
 - Furnished with blower motor for _____ AC
 - With **low fire start switch** _____, General Purpose, 115/60 AC
 - With **combustion air filter assembly** _____ (optional)
 - With **connecting base and linkage assembly** _____ to adapt customer's automatic electric control motor. Specify/select which one of these electric operators will be used:
 - Barber-Colman #EA51–58, also with prefix MC, MP or MF
 - Honeywell #M644, #M744, #M941, or #M944
 - Penn/Johnson #M-80 or #M81

3. Arranged into **pre-assembled and wired pipe train package**, 115/60VAC,
 - With **Block and Bleed** arrangement assembly _____.

4. With _____ 1-1/4" or 1-1/2" Maxon Series _____ Automatic Reset, Manual Reset **Shut-Off Valve(s)**, for natural gas, in top assembly position "L" for 115/60VAC
 - With electrical terminal block (option)
 - With 6 second, or 2.5 second opening time (automatic reset valve(s) only)
 - With _____ auxiliary signal switch(es) (optional)

NOTE: Specify which switch(es) go in main valve and which switch(es) in blocking valve, if different.

5. With **heater/duct section assembly** _____ (optional)
with return/inlet duct positioned on top, right, bottom, or left

Model "200" OVENPAK® Burners

Model "200" OVENPAK® Burner arranged with air inlet guard and optional UV scanner

Model "200" OVENPAK® Gas Burners provide a broad range of heat without a combustion blower by firing through-the-wall into your combustion chamber on the suction side of the circulating fan. An internal mixing cone blends air drawn through the burner (by chamber suction) with fuel gas delivered through its central gas nozzle. The Model "200" OVENPAK® Burner is designed for applications involving suction-side firing from -0.2" to -1.6" wc static chamber conditions. They provide:

- low initial and operating cost
- easy installation
- simple adjustment
- heavy duty cast iron construction in a compact burner configuration

Performance data

NOTE: Maximum capacity varies with the range of suction provided at operating temperature

Performance data	Maximum capacities (1000's Btu/hr) with corresponding fuel gas differential pressures at specific combustion chamber static pressure conditions									
	-0.2	-0.3	-0.4	-0.5	-0.6	-0.7	-0.8	-0.9	-1.0	-1.6

Minimum capacity (1000's Btu/hr)	10	12	13	14	15	17	18	19	20	25
Combustion air volume required (SCFM)	65	80	90	95	110	120	130	135	145	184
Natural gas differential pressure required ("wc)	0.1	0.4	0.7	1.2	1.9	2.7	3.7	4.6	6.0	9.4
Propane gas differential pressure required ("wc)	---	---	0.3	0.5	0.8	1.1	1.5	1.8	2.4	3.8
Approximate flame lengths beyond end of discharge sleeve (inches)	0 - 3	6 - 9	12 - 18	15 - 21	18 - 24	21 - 27	24 - 30		24 - 26	

Air volumes shown are for burners without damper, or with damper in full-open position. If damper is used to restrict air flow, maximum capacity will be similarly reduced.

Pilot flame issues from the same gas ports as main flame, so proof of pilot gas ignition assures ignition of main gas supply.

Flame sensing can be either by flame rod or UV scanner when natural gas is the fuel, but only with UV scanner if propane is the fuel.

Installation is simple, utilizing the built-in, direct-mounting flange provided.

A complete combustion system utilizing Model "200" OVENPAK® Burners also includes gas train, fuel-throttling valve and control system. Your Maxon representative can help you choose from the broad range of options available.

Typical pipe train

Design and Application Details

Differential gas pressures in inches water column (" wc) for both natural gas and propane are those that should be measured by connecting a manometer between test points shown in the photo below.

Model "208" OVENPAK® Burner shown with air damper and flame rod

Suction (shown in inches wc) should be that available at operating temperature. It can be determined by a two-step procedure: First, measure cold suction (chamber to atmosphere). Second, multiply that reading by the correction factor shown in Graph "A" for your desired operating temperature.

For example, if you anticipate running the system at 600°F, follow that dotted line to the right until it intersects curve, then read downward to a correction factor of 0.5. Therefore, if you read a cold suction of 1" wc, your expected suction "at temperature" would be 1" x 0.5 = 0.5" wc.

Dimensions (in inches)
